

AMR A & B Residents

We have recently upgraded the wireless in your building/rooms.

You will find a wireless device on your wall (picture below) where a data jack used to be.

This is property of JHU IT, and **not to be removed**.

That being said, it broadcasts a wireless signal just for your room, and has data jacks on the bottom for wired connectivity, so please feel free to connect to the wired and wireless network while here at JHU.

You can connect to the Wireless Network as you would anywhere else on campus.

There are 5 Ports on the bottom ('Console', 'Pass-Thru', 'LAN3', 'LAN2', 'PSE LAN1').

The Console port is inaccessible, and is for IT use only.

You can use any of the other ports for wired connectivity.

For Information on connecting devices to the Wireless or Wired Network, Please visit the following site and click on the appropriate link to the left under ResNet:
